

Lina Lux Height Adjustable Dressing Table

Lina Lux Dressing Table

The dressing table is applied in private homes, institutions and other places where children or physically handicapped young people need to be changed or nursed. The dressing table is electrically height-adjustable and has been designed to protect the attendant from harming manual lifting and allow the attendant to work at an ergonomically correct height level position.

The table top is made from unbreakable, light fibre glass. Built-in sink from same material prevents dirt from accumulating. The standard model dressing table is supplied in grey granite finish and resistant to all applicable fluid detergents without abrasive compounds.

Application

This dressing table is fastened to a wall-mounted lifting console that will allow the dressing table to be lowered when the person is to be positioned on it. The table is easy to adjust to the proper working position height. To facilitate side transfers of the person from a wheelchair or from a mobile hoist, the height of the table can be adjusted for the transfer and then readjusted to the correct working position height.

The height adjustment is seamless and can be controlled by a handheld control with a spiral cord. This will give the attendant a great deal of freedom of movement and a free hand to support the person while adjusting the nursing table to the right working position height.

The dressing table features baskets for diapers, washcloths and towels to provide a neat and handy facility.

The dressing table can be applied in wet rooms and is available with or without sink. The dressing table also features a waterproof Apollo mattress, 5 cm thick and with non-skid rear cover, as well as two baskets fitted under the table top. Nursing tables with sink include a mixing battery and flexible inlet and outlet hoses.

Safety

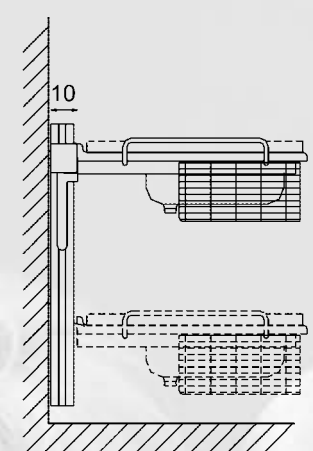

All dressing tables are supplied with a mechanical built-in pinch protection that will stop the table if resistance is met.

LINA LUX

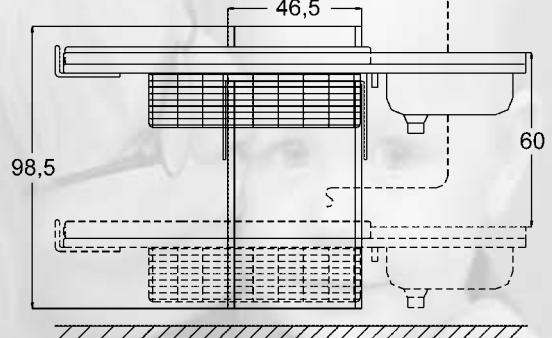

Dressing Table
