

ADAM WALKER

The Adam Walker - an optimal solution for patients who benefit from walking but require additional support.

The Adam Walker is a functional assistive device designed to provide a higher standard of care with greater efficiency and less stress for both you and the patient. Suitable in many settings, the Adam Walker is used to assist the post-op patients to walk at an early stage in their recovery when appropriate, in gait training and ambulation exercise or for any patient who would benefit from walking but needs additional support. The walker's sculpted adjustable padded armrests meets the challenge to provide comfort and support for the patient and versatility in positioning for the clinician. The walker features contoured handgrips, a clean and hygienic powder coated finish, height adjustment for individual fit and swivel casters with rear locking brakes for maneuverability. The Adam Walker comes in three models, manual adjustment, gas spring assist and rechargeable battery. The gas spring and battery powered models can help the patient easily rise from a sitting to a standing position. Optional IV pole, oxygen bottle holder and basket are available.

Adam Walker Features

The Adam Walkers are easily and quickly adjusted to suit various patient heights.

All models come standard with countered handgrips, adjustable sculpted padded armrests for comfort and fit, powder coated hygienic finish for cleaning ease and four swivel casters with rear locking brakes for maneuverability.

The gas spring assist Adam Walker is an excellent choice for patients who need minimal assistance but require some support to raise from a sitting to a standing position. Two gas spring models are offered for increased assist if required.

The rechargeable battery Adam Walker operates smoothly and silently. It effortlessly adjusts the height with a

remote hand control and provides an assist for patients to raise from a sitting to a standing position. A wider base makes transfers easier from chair or wheelchair. The battery operated Adam Walker is the optimal solution for those who need increased weight capacity.
